

CampusAI Navigator

MVP Implementation Guide — Microsoft Faculty AI Skilling Initiative | Cohort 4 | Group 13

This guide walks you through building the full proof-of-concept step by step. Every piece of content you need to copy and paste is included inline. Follow each phase in order.

Component	Tool Used
Knowledge Base	SharePoint (Pages + Lists)
AI Chatbot	Microsoft Copilot Studio
Student Interface	Microsoft Teams
Admin Portal	Microsoft Power Apps
Analytics Dashboard	Microsoft Power BI
Query Logging	Power Automate + SharePoint

Total estimated build time: 4–5 hours. No external tools. No paid extras beyond your existing Microsoft 365 access.

SharePoint is the brain of the bot. Everything the bot knows comes from these pages and lists.

Step 1.1 — Create the SharePoint Site

1. Go to sharepoint.com and sign in with your Microsoft 365 account.
2. Click + Create site in the top left.
3. Select Team site.
4. Site name: CampusAI Navigator
5. Description: Institutional AI onboarding knowledge base for students.
6. Privacy: Private (you control access). Click Next then Finish.
7. You now have a blank SharePoint site. Keep this tab open.

Step 1.2 — Create the Four Knowledge Pages

From your SharePoint site: click Pages in the left sidebar → New → Page → Blank → give it the title below → paste the content provided → Publish.

Page 1: Approved AI Tools

Title to enter in SharePoint:

Approved AI Tools for Students

Body content — copy everything below this line and paste into the page body:

This page lists AI tools students are permitted to use for academic work. Each tool includes approved use cases and restrictions.

MICROSOFT COPILOT

Status: Fully Approved

What it is: Microsoft's AI assistant built into your M365 apps – Word, Teams, OneNote, and Outlook.

Approved for: Drafting and editing written work, summarising research, generating study notes, brainstorming, creating presentation outlines.

How to access: Open any M365 app and click the Copilot (sparkle) icon, or go to copilot.microsoft.com and sign in with your institution email.

Restrictions: Do not submit Copilot output as your own without disclosure. Always verify facts before including them in academic submissions.

CHATGPT (OpenAI)

Status: Conditionally Approved

What it is: General-purpose AI chatbot for text generation, Q&A, summarisation, and code support.

Approved for: Research ideation, concept explanation, code debugging, essay outlining, language translation support.
How to access: chatgpt.com – free tier available.
Restrictions: Must be disclosed in all submissions. Do not paste full assignment questions and submit the output. Not approved for invigilated assessments. Content must be reviewed, verified, and substantially rewritten by the student.

GRAMMARLY

Status: Fully Approved
What it is: AI writing assistant for grammar, spelling, tone, and clarity.
Approved for: Proofreading and editing all written academic work.
How to access: grammarly.com – browser extension recommended.
Restrictions: The Rewrite and Paraphrase features must not replace your original writing. Use for editing, not generation.

GITHUB COPILOT

Status: Approved for CS and Engineering students only
What it is: AI code completion tool integrated into VS Code and other IDEs.
Approved for: Code completion, debugging assistance, syntax explanation.
How to access: github.com/copilot – free for students via GitHub Education.
Restrictions: Disclose use in programming assignments. Do not use to complete entire functions without understanding the code.
Not permitted in practical examinations.

PERPLEXITY AI

Status: Conditionally Approved
What it is: AI-powered search engine that answers questions with sources.
Approved for: Literature discovery, quick fact-checking, research starts.
How to access: perplexity.ai – free tier available.
Restrictions: Always verify cited sources independently. Do not treat Perplexity answers as primary academic sources.

Need help choosing a tool? Ask CampusAI Navigator in Microsoft Teams.

Page 2: Academic Integrity Policy on AI Use

Title to enter in SharePoint:

Academic Integrity Policy: AI Use Guidelines

Body content:

This policy governs how students may use AI tools in academic work.
It applies to all programmes, all levels, and all modes of study.

WHAT COUNTS AS AI-ASSISTED WORK

Any work partially or wholly generated, rewritten, summarised, or completed with the assistance of an AI tool is considered AI-assisted. This includes text, code, images, data analysis, and translations.

WHAT IS PERMITTED

- Using approved AI tools for ideation, outlining, editing, and research support
- Using AI to understand concepts or generate personal study materials
- Using AI for code debugging where explicitly permitted by your lecturer
- Using AI-powered grammar and spelling checkers for all written work

WHAT IS NOT PERMITTED

- Submitting AI-generated content as your own without disclosure
- Using AI tools during invigilated examinations or timed tests
- Using AI to complete assessments entirely on your behalf
- Sharing full assessment questions with public AI tools

DISCLOSURE REQUIREMENTS

Where AI was used in any submission, include this statement at the end:

AI Disclosure: [Tool name] was used to [describe use, e.g. generate an initial outline / check grammar / explain a concept]. All content was reviewed, verified, and substantially modified by the author.

ACADEMIC CONSEQUENCES

Undisclosed or unapproved AI use in academic submissions constitutes academic dishonesty and may result in:

- A mark of zero for the assessment
- Academic probation
- Disciplinary proceedings as per the institution academic integrity policy

Questions? Contact your Student Affairs office or ask CampusAI Navigator.

Page 3: How to Use Microsoft Copilot

Title to enter in SharePoint:

Getting Started with Microsoft Copilot

Body content:

Microsoft Copilot is your AI assistant built into your M365 account. This guide walks you through accessing and using it for your studies.

STEP 1 – ACCESS COPILOT

Option A (Web): Go to copilot.microsoft.com, sign in with your institution Microsoft 365 email.

Option B (Inside M365 apps): Open Word, OneNote, or Teams. Look for the sparkle icon (✨) in the toolbar or sidebar.

Option C (Inside Teams): Click the Copilot icon in the left sidebar.

STEP 2 – YOUR FIRST CONVERSATION

Type your request in plain English in the chat input at the bottom.

Example: Explain the concept of supply and demand in simple terms.

Copilot will respond. You can ask follow-up questions to refine the answer.

STEP 3 – PRACTICAL USES FOR STUDENTS

Summarising long readings:

Summarise the key arguments in this text: [paste text]

Brainstorming essay ideas:

Give me 5 angles I could argue for an essay on climate change policy.

Explaining difficult concepts:

Explain machine learning to me like I am a first-year student.

Building a study plan:

Create a 2-week revision plan for a 4-topic exam on business strategy.

Drafting professional emails:

Help me write a professional email to my lecturer requesting an extension.

STEP 4 – ALWAYS REVIEW THE OUTPUT

Copilot can produce inaccurate information.

Before using output in academic work:

- Verify facts independently
- Rewrite in your own voice
- Add your AI Use Disclosure Statement

Need more help? Ask CampusAI Navigator in Teams.

Page 4: Prompt Engineering Basics

Title to enter in SharePoint:

Prompt Engineering: Getting Better Answers from AI

Body content:

A prompt is the instruction you give an AI tool. A well-structured prompt gets you a useful response. A vague prompt gets you a vague answer.

THE ANATOMY OF A GOOD PROMPT

1. Role – Tell the AI who it is: Act as a university tutor
2. Task – Tell it what to do: Explain the concept of...
3. Context – Give relevant info: I am a first-year Business student
4. Format – Tell it how to respond: In bullet points, under 200 words

5 PROMPT TEMPLATES YOU CAN COPY

TEMPLATE 1 – Concept Explanation:

Act as a university lecturer. Explain [concept] to a first-year [subject] student. Use simple language, one real-world example, and keep it under 150 words.

TEMPLATE 2 – Essay Outline:

I am writing a [word count]-word essay on [topic] for a [course] course. Generate a structured outline with 3 main arguments and supporting points.

TEMPLATE 3 – Study Notes:

Convert the following text into concise revision notes with headings and bullet points. Highlight the 3 most important ideas. [Paste text here]

TEMPLATE 4 – Code Explanation (CS students):

Explain what this code does line by line in plain English. Identify any potential bugs. [Paste code here]

TEMPLATE 5 – Practice Questions:

Generate 5 exam-style questions on [topic] for a [level] [subject] student. Include the expected answer for each question.

COMMON MISTAKES TO AVOID

Too vague: Tell me about marketing

Better: Explain the 4Ps of marketing with a retail industry example.

Too much at once: Break complex tasks into smaller follow-up prompts.

Accepting the first answer: Always ask for a revision or follow-up.

Practice: Open Microsoft Copilot in Teams and try Template 1 with a topic from your current coursework.

Step 1.3 — Create the AI Tools Registry List

This list feeds the Power Apps admin portal. Follow these steps exactly.

8. From your SharePoint site, click Site contents → New → List.
9. Name: AI Tools Registry. Click Create.
10. You will see a default 'Title' column. Rename it: click the Title column header → Column settings → Rename → type Tool Name → Save.

11. Add these 4 extra columns (click + Add column for each):

Column Name	Column Type
Category	Single line of text
Approved For	Multiple lines of text
Restrictions	Multiple lines of text
Resource Link	Hyperlink

12. Now add these 5 rows. Click + New for each row:

Field	Row 1 — Microsoft Copilot
Tool Name	Microsoft Copilot
Category	Productivity & Writing
Approved For	All students — drafting, editing, summarising, brainstorming
Restrictions	Disclosure required. Verify all facts. Do not submit output without review.
Resource Link	https://copilot.microsoft.com

Field	Row 2 — ChatGPT
Tool Name	ChatGPT
Category	General AI Assistant
Approved For	Research ideation, concept explanation, outlining, code debugging
Restrictions	Disclosure required. Not for invigilated assessments. Must be rewritten by student.
Resource Link	https://chatgpt.com

Field	Row 3 — Grammarly
Tool Name	Grammarly
Category	Writing Assistant
Approved For	All students — proofreading and grammar checking
Restrictions	Rewrite and Paraphrase features must not replace original writing.
Resource Link	https://grammarly.com

Field	Row 4 — GitHub Copilot
Tool Name	GitHub Copilot
Category	Coding Assistant

Approved For	CS and Engineering students — code completion and debugging
Restrictions	Disclose in assignments. Not permitted in practical exams.
Resource Link	https://github.com/copilot

Field	Row 5 — Perplexity AI
Tool Name	Perplexity AI
Category	AI Search
Approved For	Research starting points and fact-checking
Restrictions	Verify all cited sources independently. Not a primary academic source.
Resource Link	https://perplexity.ai

Step 1.4 — Create the Bot Query Log List

This list stores escalated queries and feeds your Power BI dashboard.

13. Site contents → New → List → Name: Bot Query Log → Create.
14. Rename the default Title column to: Query Topic.
15. Add these 3 columns:

Column Name	Column Type
Date	Date and time
Resolved	Yes/No
Escalated	Yes/No

16. Add 10 sample rows manually (click + New each time) using today's date, varying topics from the 4 SharePoint pages, and a mix of Yes/No values. These populate your Power BI demo dashboard.

 Sample topics to use: *Approved Tools, ChatGPT Policy, Copilot Access, Prompt Help, Academic Integrity, Disclosure Format, GitHub Copilot, Grammarly Use, Study Notes, Contact Request.*

Step 2.1 — Create the Agent

17. Go to copilotstudio.microsoft.com and sign in.
18. Click + New agent (top left).
19. Skip the AI build wizard — click Skip to configure.
20. Enter these details:

```
Name:          CampusAI Navigator
Description:    Helps university students find approved AI tools, understand
               academic integrity policies, and build practical AI literacy.
Instructions:   You are CampusAI Navigator, an AI onboarding assistant for
               university students. Answer questions about approved AI tools,
               academic integrity policies, Microsoft Copilot usage, and prompt
               engineering. Keep responses clear, friendly, and under 200 words.
               When you cannot answer, offer to escalate to Student Affairs.
```

21. Click Create. You now have a blank agent.

Step 2.2 — Connect SharePoint as the Knowledge Source

22. In your agent, click the Knowledge tab in the top navigation.
23. Click + Add knowledge → SharePoint.
24. Paste your SharePoint site URL (e.g. <https://yourtenant.sharepoint.com/sites/CampusAINavigator>).
25. Select all 4 pages (Approved AI Tools, Academic Integrity Policy, Getting Started with Copilot, Prompt Engineering Basics).
26. Click Add. Wait for indexing to complete (1–2 minutes).
27. Go to Settings → Generative AI → turn on Generative answers → Save.

 This one step means the bot can answer almost any student question grounded in your SharePoint content — without you manually scripting every response.

Step 2.3 — Create the 4 Manual Topics

Manual topics give reliable, scripted answers for the most critical queries. Go to Topics → + New topic → From blank for each one.

Topic 1: Greeting

Trigger phrases — add each one as a separate phrase:

```
hi
hello
hey
good morning
```

```
good afternoon
get started
what can you do
help me
start
```

Message node — paste this exactly:

```
Hi! I'm CampusAI Navigator, your guide to AI tools and policies.
```

```
Here is what I can help you with:
```

- Find out which AI tools are approved for your coursework
- Understand the academic integrity policy on AI use
- Learn how to use Microsoft Copilot effectively
- Get started with prompt engineering

```
What would you like to know?
```

Save the topic. Name it: Greeting.

Topic 2: Tool Lookup

Trigger phrases:

```
what AI tools can I use
approved tools
which tools are allowed
can I use ChatGPT
can I use AI for assignments
what tools does the institution approve
AI tools for students
which AI is approved
```

Message node:

```
Your institution has approved several AI tools for student use:
```

```
APPROVED:
```

- Microsoft Copilot – fully approved for all students (your M365 account)
- Grammarly – fully approved for writing and proofreading

```
CONDITIONALLY APPROVED (disclosure required):
```

- ChatGPT – for research, outlining, and concept explanation
Not for invigilated assessments. Must disclose use.
- Perplexity AI – for research starting points. Verify all sources.

```
CS AND ENGINEERING STUDENTS ONLY:
```

- GitHub Copilot – code completion and debugging

For full restrictions, visit the Approved AI Tools page on the knowledge base or ask me about a specific tool by name.

Save the topic. Name it: Tool Lookup.

Topic 3: Policy Check

Trigger phrases:

is it allowed
academic integrity
can I submit AI work
AI policy
will I get in trouble
what are the rules on AI
do I need to disclose
how do I cite AI
AI in assignments

Message node:

Here is the short version of the AI academic integrity policy:

ALLOWED:

- Using AI for ideation, outlining, editing, summarising – with disclosure
- AI-powered grammar and spell checking

NOT ALLOWED:

- Submitting AI-generated content as your own without disclosure
- Using AI during invigilated exams or timed tests

DISCLOSURE STATEMENT – add this to the end of any AI-assisted submission:

AI Disclosure: [Tool] was used to [describe use]. All content was reviewed and substantially modified by the author.

Undisclosed AI use is treated as academic dishonesty.

Want the full policy? I can pull it up for you.

Save the topic. Name it: Policy Check.

Topic 4: Escalate

Trigger phrases:

talk to someone
contact

need human help
speak to a person
student affairs
not answered
my question is not covered
I need more help
escalate

Message node:

I am not able to help with that one – let me connect you to someone who can.

Student Affairs: studentaffairs@yourinstitution.ac
Academic Integrity Office: integrity@yourinstitution.ac
IT Support (M365 issues): itsupport@yourinstitution.ac

You can also visit the Student Services portal on your institution website.

Is there anything else I can help you with?

Save the topic. Name it: Escalate.

 *Update the email addresses above with your actual institution contacts before demo day.*

Step 2.4 — Test the Bot

28. Click the Test button (top right of Copilot Studio) to open the test panel.
29. Test each of these 5 queries and confirm the bot responds correctly:

Test Query	Expected Behaviour
What AI tools can I use?	Tool Lookup topic fires — lists approved tools
Is ChatGPT allowed for my essay?	Generative answer from SharePoint policy page
How do I use Microsoft Copilot?	Generative answer from Copilot guide page
What is a good prompt?	Generative answer from Prompt Engineering page
I need to talk to someone	Escalate topic fires — shows contact details

 *If a generative answer is wrong or incomplete, go back to the SharePoint page and add more detail to that section.*

Step 3.1 — Publish the Bot

30. In Copilot Studio, click Publish in the top navigation bar.
31. Click Publish now. Wait for the green confirmation message.

Step 3.2 — Connect to Microsoft Teams

32. Click Channels (in the left sidebar).
33. Find Microsoft Teams and click Turn on.
34. Click Open bot in Teams — this opens Teams and adds the bot to your personal chat.
35. Test by typing: 'What AI tools can I use?' — confirm the bot replies in Teams.

Step 3.3 — Add the Bot to a Team Channel (for demo)

36. In Microsoft Teams, go to the team or channel you will use for the demo.
37. Click the + icon at the top to add a tab.
38. Search for your bot by name: CampusAI Navigator.
39. Click Add. The bot is now pinned in that channel.

 *For the capstone demo, create a test channel called CampusAI Demo so you can show the bot in a realistic student environment.*

This app lets an admin view, add, and edit the Approved AI Tools list without ever opening SharePoint.

Step 4.1 — Create the Canvas App

40. Go to make.powerapps.com and sign in.
41. Click + Create → Canvas app from blank.
42. App name: CampusAI Tool Registry
43. Format: Tablet. Click Create.
44. You will land in the Power Apps Studio canvas editor.

Step 4.2 — Connect to SharePoint

45. In the left panel, click Data (cylinder icon).
46. Click + Add data → search SharePoint → connect to your site URL.
47. Select AI Tools Registry from the list of lists. Click Connect.

Step 4.3 — Build Screen 1: Tool List

This is the home screen showing all approved tools.

48. Insert a Rectangle for the header bar: Insert → Rectangle. Set these properties:

```
Fill: RGBA(0, 120, 212, 1)
X: 0
Y: 0
Width: Parent.Width
Height: 80
```

49. Insert a Text label for the title: Insert → Text label. Properties:

```
Text: "CampusAI Navigator – Tool Registry"
X: 20
Y: 20
Color: RGBA(255,255,255,1)
Size: 18
FontWeight: FontWeight.Bold
```

50. Insert a vertical Gallery: Insert → Gallery → Vertical. Properties:

```
Items: 'AI Tools Registry'
X: 0 Y: 100 Width: Parent.Width Height: Parent.Height - 100
TemplatePadding: 10
```

51. Inside the gallery template, add these 3 labels (click the gallery → click inside the template):

```
Label 1 – Tool Name:
  Text: ThisItem.'Tool Name'
  FontWeight: FontWeight.Bold   Size: 14   Color: RGBA(0,0,0,1)

Label 2 – Category:
  Text: ThisItem.Category
  Size: 12   Color: RGBA(100,100,100,1)

Label 3 – Approved For:
  Text: ThisItem.'Approved For'
  Size: 11   Color: RGBA(130,130,130,1)
```

52. Add an Edit button inside the gallery template:

```
Insert → Button   Text: "Edit"
OnSelect: Navigate(EditScreen, ScreenTransition.Fade, {SelectedTool: ThisItem})
```

53. Add a + New Tool button at the bottom of the screen (outside the gallery):

```
Insert → Button   Text: "+ New Tool"
Fill: RGBA(0, 120, 212, 1)   Color: White
OnSelect: NewForm(ToolForm); Navigate(EditScreen, ScreenTransition.Fade)
```

Step 4.4 — Build Screen 2: Edit / Add Tool

54. Add a new screen: click the Screens panel (left) → + New screen → Blank. Name it EditScreen.

55. Add a Form control: Insert → Edit form. Properties:

```
DataSource: 'AI Tools Registry'
Item: SelectedTool   (this populates the form when editing)
DefaultMode: If(IsBlank(SelectedTool), FormMode.New, FormMode.Edit)
X: 20  Y: 100  Width: Parent.Width - 40  Height: Parent.Height - 180
```

56. In the form, click Edit fields → Add all 5 fields: Tool Name, Category, Approved For, Restrictions, Resource Link.

57. Add Save button:

```
Text: "Save"
Fill: RGBA(0,120,212,1)   Color: White
OnSelect: SubmitForm(ToolForm); Navigate(ConfirmScreen, ScreenTransition.Fade)
```

58. Add Cancel button:

```
Text: "Cancel"  
OnSelect: Navigate(ToolListScreen, ScreenTransition.Fade)
```

Step 4.5 — Build Screen 3: Confirmation

59. Add a new blank screen. Name it ConfirmScreen.

60. Add a Text label:

```
Text: "Tool registry updated successfully."  
Align: Center  
Size: 16  
Color: RGBA(16,124,16,1)
```

61. Add a Back to List button:

```
Text: "Back to Tool List"  
OnSelect: Navigate(ToolListScreen, ScreenTransition.Fade)
```

Step 4.6 — Publish and Add to Teams

62. Click File → Save → Publish.

63. In Microsoft Teams → + Add a tab (in your demo channel) → Power Apps → select CampusAI Tool Registry → Save.

Admins now manage the tool list directly from Teams — no SharePoint access needed.

PHASE 5

Power Automate — Query Logging (~20 min)

This flow automatically logs a row to the Bot Query Log list every time a student hits the Escalate topic. It feeds your Power BI dashboard.

Step 5.1 — Create the Flow

64. Go to make.powerautomate.com → + Create → Automated cloud flow.
65. Flow name: Log Bot Escalation
66. Trigger: search for 'When an HTTP request is received' → select it → Create.
67. In the trigger, click Use sample payload to generate schema and paste this:

```
{
  "topic": "Escalate",
  "resolved": false,
  "escalated": true
}
```

68. Click + New step → search 'Create item' → select SharePoint — Create item.
69. Configure the step:

```
Site Address: [paste your SharePoint site URL]
List Name: Bot Query Log
Query Topic: [dynamic content → topic]
Date: [dynamic content → utcNow()]
Resolved: [dynamic content → resolved]
Escalated: [dynamic content → escalated]
```

70. Click Save. Copy the HTTP POST URL from the trigger (you will need this in Copilot Studio).

Step 5.2 — Connect the Flow to the Escalate Topic

71. Back in Copilot Studio → Topics → Escalate.
72. After the message node, click + → Call an action → Create a flow.
73. Alternatively: click + → Call an action → select Log Bot Escalation from the list.
74. Pass these values: topic = 'Escalate', resolved = false, escalated = true.
75. Save the topic.

 For the POC demo, it is fine to also add 10 rows manually to Bot Query Log to ensure the Power BI dashboard has data on demo day.

Step 6.1 — Install Power BI Desktop

76. Download Power BI Desktop from powerbi.microsoft.com/desktop (free).
77. Install and sign in with your Microsoft 365 account.

Step 6.2 — Connect to the SharePoint List

78. Open Power BI Desktop → Get data → SharePoint Online List.
79. Paste your SharePoint site URL (the root URL, not the list URL).
80. Select Bot Query Log from the list of available tables. Click Load.

Step 6.3 — Clean the Data

81. Click Transform data (top ribbon) to open Power Query.
82. Select the Date column → right-click → Change Type → Date.
83. Select Resolved and Escalated columns → right-click → Change Type → True/False.
84. Click Close and Apply.

Step 6.4 — Create the 4 Visuals

Add each visual by clicking the chart icon in the Visualisations panel on the right.

Visual 1: Total Queries (Card)

85. Insert → Card visual.
86. Drag Query Topic to the Fields well.
87. Change aggregation to Count.
88. Title: Total Student Queries

Visual 2: Queries by Topic (Bar Chart)

89. Insert → Clustered bar chart.
90. X-axis: Query Topic (Count). Y-axis: Query Topic (field).
91. Title: Queries by Topic

Visual 3: Resolution Rate (Donut Chart)

92. Insert → Donut chart.
93. Legend: Resolved. Values: Query Topic (Count).
94. Title: Resolution Rate

Visual 4: Queries Over Time (Line Chart)

95. Insert → Line chart.

96. X-axis: Date. Y-axis: Query Topic (Count).

97. Title: Queries Over Time

Step 6.5 — Add a DAX Measure for Escalation Rate

In the Fields panel, right-click Bot Query Log → New measure. Paste this formula:

```
Escalation Rate =  
DIVIDE(  
    COUNTROWS(FILTER('Bot Query Log', 'Bot Query Log'[Escalated] = TRUE())),  
    COUNTROWS('Bot Query Log'),  
    0  
) * 100
```

98. Add a Card visual using this measure. Title: Escalation Rate (%)

Step 6.6 — Publish and Embed in Teams

99. File → Publish → Publish to Power BI → select your workspace → Publish.

100. In Microsoft Teams → your demo channel → + Add a tab → Power BI → select CampusAI Navigator Dashboard → Save.

 *Your dashboard now lives in the same Teams channel as the bot and the Power Apps admin portal — one workspace, full story.*

Use this script on submission or presentation day. The full demo runs in Microsoft Teams without leaving the app.

Minute	What to Show
0:00 – 1:00	Open Teams. Show the CampusAI Demo channel. Explain the problem: students have no structured AI onboarding.
1:00 – 2:30	Chat with the bot: ask 'What AI tools can I use?' then 'Is ChatGPT allowed for my essay?' Show live generative answers from SharePoint.
2:30 – 3:30	Switch to the Power Apps tab. Show the tool registry. Add a new tool live to demonstrate admin control.
3:30 – 4:30	Switch to the Power BI tab. Walk through the 4 visuals — total queries, topic breakdown, resolution rate, queries over time.
4:30 – 5:00	Close: 'Any university with M365 can deploy this in one afternoon. No new infrastructure. No procurement. Just Teams.'
