

CampusAI Navigator

An Institutional AI Onboarding Assistant for University Students

Microsoft Faculty AI Skilling Initiative | Cohort 4 | Group 13

Institutional AI Enablement Track

The Problem

Students enter university with no structured AI onboarding.

No Policy Guidance

Students don't know which AI tools are allowed or how to disclose usage correctly.

No Tool Awareness

Approved tools go unused while students default to unvetted alternatives.

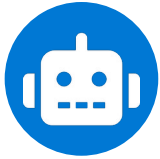

No Institutional Visibility

Universities have no data on how students are engaging with AI tools.

Our Solution

CampusAI Navigator — built 100% on Microsoft 365

Copilot Studio

AI chatbot grounded in
SharePoint knowledge

SharePoint

Knowledge base: tools, policy,
how-to guides

Power Apps

Admin portal to manage the
tool registry

Power BI

Live dashboard tracking
student adoption

Deployed via Microsoft Teams — zero new infrastructure, no procurement, runs inside your existing M365 tenant.

Group 13

Microsoft Faculty AI Skilling Initiative
Cohort 4 — Institutional AI Enablement Track

How We Collaborated

Ideation

Defined the problem and solution track together

Build

Divided phases across team members by tool

Testing

Group testing of all 5 bot topics and flows

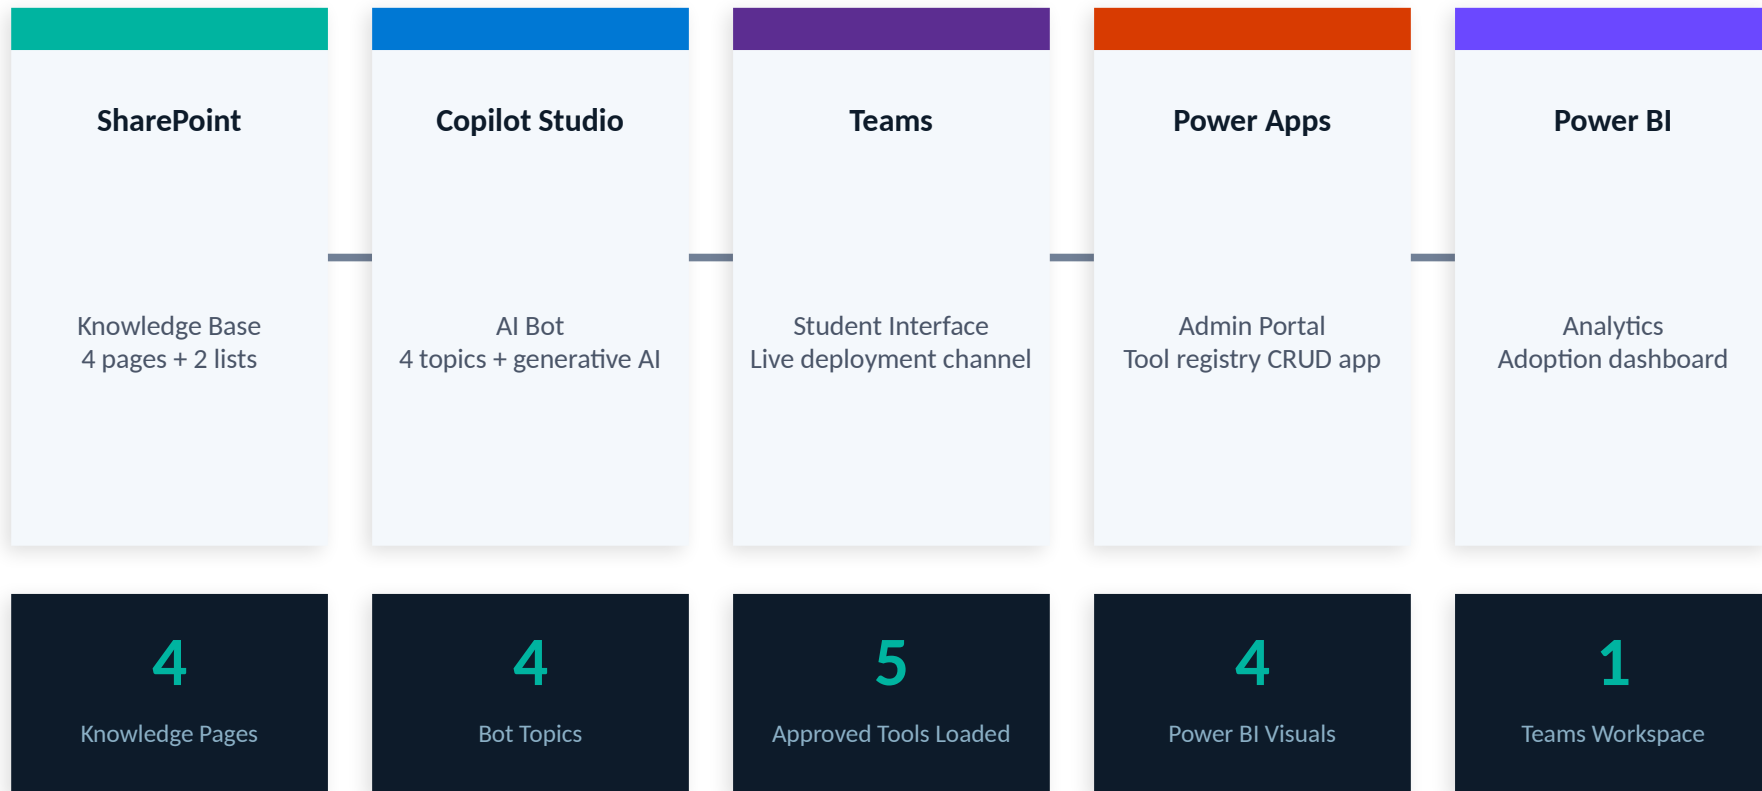

Review

Peer review of SharePoint content and Power BI

What We Built

5 components. 1 Teams workspace. Zero new infrastructure.

Challenges

Teams Publishing — Licensing Restriction

Copilot Studio agent could not be published to Microsoft Teams due to licensing tier constraints in our institutional M365 environment.

→ **Workaround:** Bot was tested and validated within Copilot Studio's native test environment. Deployment configuration was documented for institutions with appropriate licensing.

System Topic Naming Conflict

Copilot Studio has a reserved system topic named 'Escalate'. A custom topic cannot share that exact name.

→ **Workaround:** Custom topic renamed to 'Escalate to Team' — same functionality, no conflict. All trigger phrases and response scripts remained intact.

Cross-Institution Coordination

Group 13 spans multiple universities with different M365 tenant configurations, making shared testing environments complex to set up.

→ **Workaround:** Each member built and tested within their own institutional environment. Results were validated and consolidated as a group.

Live Demo

- 1 Bot answers student queries live in Copilot Studio
- 2 Power Apps admin portal — add a tool in real time
- 3 Power BI dashboard — adoption analytics
